SUBJECT INDEX TO VOLUME 8

abstracts, use of 1985 8(4) 293
accessibility of patent information 8(2) 75
activity 1985 in mechanical search systems 8(4) 289
advantages of patent documents 8(7) 71
analysis of patent information, use of Pergamon InfoLine GET Command 8(2) 98–103
applications in digital form 8(2) 67
appropriate technology 8(2) 110
Arkwright, legal judgment concerning his spinning patents 8(1) 33–37
Automated Patent Search (APS) System 8(4) 249
— definition of data for 8(4) 250
— database structure and content 8(4) 250
— data loading 8(4) 250
— image data 8(4) 252
automated search databases at the USPTO 8(4) 249
automated text searching of U.S. patents 8(1) 4–7
automation project 8(2) 66–69
— application processing 8(2) 67
availability of data in U.K. 8(3) 194
awareness of intellectual property 8(3) 194

backfile conversion 8(2) 67, 8(3) 211
BACON 8(4) 254
bibliometric analysis of patent information 8(2) 98–103
biotechnology 8(2) 117
blips on microfilm for searching 8(2) 79
braking systems 8(2) 119

CAS Online and U.K. system C2C — basic facts 8(1) 20, 21
CD-ROM for patents 8(3) 175–181
— discs 8(3) 175
— hardware 8(3) 179
central patent library of GDR office 8(3) 208
chemical structures, generic (Markush) searching 8(2) 85–91
Chinese documents publication of 8(1) 8–19
— breakdown according to IPC 8(1) 9–14
— front page 8(1) 15
— numbers of 8(1) 8
Chinese Official Gazettes 8(1) 8
classification activities 1985 8(4) 290
classification index on CD-ROM 8(3) 176
compact audio disc 8(3) 178
Compact Disc - Interactive (CDI) 8(3) 180
comparison of manual and full text searches 8(1) 4–7
comparison of online searching organic chemical structures CAS and U.K. Patent Office system 8(1) 20–28
— search results 8(1) 21, 25
comparison of searching using classification and keywords 8(1) 38–40
co-operation in exchange of search results 8(2) 67
computer-aided microfilm search system 8(2) 79
computerisation of U.K. Patent Office 8(3) 182
— administration 8(3) 183
— Register 8(3) 182
— search facility 8(3) 183
computer technology, developments in 8(2) 121
criteria for evaluation of searches 8(1) 4–7
criticisms of patent documents as a source of technical information 8(2) 75
cross-host or crossfile searching in patent databases 8(1) 45; 8(4) 243
— in QUESTEL-INPADOC 8(4) 246
— in SDC-QUESTEL 8(4) 245
— limitations 8(4) 247
cumulative curves of patent activity in X-ray apparatus 8(2) 131–133
— in Germany 8(2) 131, 136, 137
— in U.S.A. 8(2) 132
— in U.S.S.R. 8(2) 133

DARC on QUESTEL 8(2) 104
databank for text searches in German specifications 8(4) 287
databases, cross-host searching in 8(3) 243
database searchable online (PATDPA) 8(1) 29–32
data transmission time 8(3) 180

DATIMTEX system of the EPO 8(2) 67, 92–97, 8(4) 254
— effects for applicants 8(2) 96
— effects for EPO 8(2) 96
definition of data for full text searching 8(4) 250
description in patent specifications, precedent legal case 8(1) 33–37
development of a technical field, theory for estimating rate of development 8(2) 121–128
development of rural areas, use of patent documentation 8(2) 110–116
digitalization and vectorization 8(3) 180
digitalization of graphics for printing German A1 documents 8(1) 29–32
digitalization of patent applications 8(2) 67, 92, 93
digital optical discs 8(3) 180
digitised databases 8(2) 68
distribution of patents between patentees 8(2) 98–103
dissemination of patent information 8(2) 67
drawings, transmission of 8(1) 29–32
— by vector techniques 8(1) 29–32

ECLA file of EPO 8(4) 255
electronic file wrapper 8(2) 67
electronic storage of patent documents 8(2) 67
— of PCT Minimum Documentation 8(2) 67
EMIR (EDP-Microfilm-Integrated-Retrieval) 8(2) 79
EPO family coverage 8(2) 105
EPO patents on QUESTEL 8(2) 105
EPO Symposium, Munich 8(2) 68
exchange of search results 8(2) 68
exchange of statistical information 8(2) 67, 69

filing of patent applications in machine-readable form 8(2) 67
— digital transmission 8(2) 67
— floppy disc 8(2) 67
— OCR 8(2) 67
filing procedures at EPO 8(2) 93
film on U.K. Patent Office 8(1) 41–44
— compilation for exhibition 8(1) 44
— distribution 8(1) 44
flat cathode-ray tubes 8(2) 119
floppy discs accepted by EPO 8(2) 95
form of disclosure of chemical structural information in patents 8(2) 85
fragment codes 8(2) 86
French patents on QUESTEL 8(2) 104
front page of Chinese patent application 8(1) 15
full text database of U.S. patents 8(4) 249
— file conversion 8(4) 250
— database content 8(4) 251
full text searching 8(1) 4–7
future of patent information services 8(3) 181

GDR central patent library 8(3) 208
GDR patent information system 8(3) 207
generic Chemical structures in patents (Markush Structures), searching 8(2) 85–91
genetic engineering 8(2) 117
GENSAL (Generic Structure Language) 8(2) 88, 89
German online searchable patent database (PATDPA) 8(1) 29–32
GET Command, use for analysis of patent information 8(2) 98–103
graphics, handling, storage and transmission 8(1) 31
graphic retrieval facilities for Markush structures 8(2) 85–91
graphics, techniques for transmission 8(1) 29–32
guidelines for filing machine-readable applications 8(2) 67

harmonisation of patent practice 8(2) 67, 69
help in searching databases 8(2) 145
hybrid processing 8(4) 281

ignorance of patent information 8(2) 75
Ilmenau Institute of Technology patent databanks 8(4) 278
image data capture, standards of 8(3) 215
image data of U.S. database 8(4) 252
images, storage and transmission requirements 8(3) 177

impact of optical disc technologies on the storage and distribution of patent and trademark information 8(3) 177–181
Indian National Informatics Centre (NIC) 8(4) 270
Indian Patent Act 1970 8(4) 268
influence of patent laws on patent information 8(4) 267
information recording and retrieval 8(2) 121
information services of Swiss office 8(3) 198
— EPO database information 8(3) 201
— on Swiss applications and patents 8(3) 198
— subject searches 8(3) 200
— technical information service 8(3) 203
information technology 8(2) 66
INPI-1 file, QUESTEL 8(2) 104
INPI-2 file, QUESTEL 8(2) 105
insufficient awareness of intellectual property 8(3) 194
intellectual property and innovation: comment on U.K. White Paper 8(3) 193
INVEntory file of EPO 8(4) 255

Japanese office, paperless plan 8(3) 210
— backfile conversion 8(3) 211
— database system 8(3) 210
judgment for patents as information 8(1) 33–37

keywords, use of in searching 8(1) 38–40; 8(2) 79–83

laser printing from optical discs 8(2) 67
Laservision – Read Only Memory (LV-ROM) 8(3) 180
legal status information from INPADOC, edited 8(4) 247
libraries and public services 8(4) 291
locating generic chemical information 8(2) 85
Lotka's Law 8(2) 98

machine translation 8(2) 68
manual search in paper search files schematized 8(2) 80
Markush structures, searching 8(1) 22 8(2) 85–91
Memorandum of Understanding EPO–USPTO–JPO 8(2) 66
MEMSORT QUESTEL 8(2) 107
methods of obtaining technical knowledge 8(2) 76
microfilm readerprinter 8(2) 80
microfilm search system schematized 8(2) 81
monitoring of time limits by computer 8(3) 183

name/address handling system 8(3) 183
National Information Centre for Drugs and Pharmaceuticals, India 8(4) 271
negative binomial distribution of patents between patentees 8(2) 98–103

OCR, for processing patent applications 8(2) 67
Official Gazettes, Chinese 8(1) 8
oil-saving burner 8(2) 143
online searchable patent database with display of drawing (PATDPA) 8(1) 29–32
optical disc technologies 8(3) 178
optical fibres 8(2) 121
Optical Read Only Memory (OROM) 8(3) 180
organic chemical structures, searching 8(1) 20–28
organization of U.S.S.R. Patent File Network 8(4) 273

paperless plan of Japanese office 8(3) 210
Paris Convention 8(4) 267
particularly active fields of technology at the EPO 8(2) 117–121
PATDPA — online searchable database 8(1) 29–32
patent abstracts on CD-ROM 8(3) 176
patent activity in Germany in X-ray apparatus 8(2) 131
patent activity in U.S.A. in X-ray apparatus 8(2) 132
patent activity in U.S.S.R. in X-ray apparatus 8(2) 132
patent databanks at the Ilmenau Institute of Technology 8(4) 278
patent document and information centre 8(2) 112
patent documentation as help to develop rural areas 8(2) 110–116
patent documents as source of information 8(2) 70, 74
patent information available on QUESTEL 8(2) 104–109
patent information dissemination guidelines 8(2) 68
patent information in India 8(4) 266
— existing services 8(4) 269
patent information in the electronic age — EPO symposium 8(2) 68; 8(4) 254
patent information services, future of 8(3) 181
patent information services, notes on 8(2) 77, 78
patent information services of Swiss office 8(3) 198
patent law reform in U.K. 8(3) 193
patents and CD-ROM 8(3) 175
patents as information, legal judgment 8(1) 33–37
patents as source of technology 8(2) 70–78
patent searching for legal purposes 8(2) 71
patent searching using classification and keywords 8(1) 38–40
patents in transfer of technology 8(2) 70
patent statistics for revealing technological trends 8(2) 70
patent statistics, in relation to technological trends 8(2) 73
Pergamon InfoLine GET Command for patent information analysis 8(2) 98–103
Pergamon InfoLine, U.K. Patent Office databases on 8(3) 185
photographic materials 8(2) 118
'POISK' Scientific and Production Amalgamation, U.S.S.R. 8(4) 273
printing and publication of patent documents 8(4) 292
prior art searching at the German Patent Office 8(2) 79–84
procedure for production of printed EPO applications 8(2) 93
prognosis of patent activity development 8(2) 122–142
promotion of technology by GDR patent information system 8(3) 206
publication of Chinese documents 8(1) 8–19

QUESTEL, patent information available on 8(2) 104–109
QUESTEL Plus software 8(2) 104

Rapid Patent Service (RPS) 8(3) 171
— classification order watch service 8(3) 173
— document acquisition 8(3) 172
— document delivery 8(3) 172
— patent alert subscription service 8(3) 172
raster and vector techniques 8(1) 29–32
— raster to vector conversion 8(1) 30, 31
reasons for consulting patent information 8(2) 73
receipting of documents, computerisation 8(3) 183
recording video image on optical discs 8(3) 178
reducing bulkiness of search files 8(2) 83
regional patent files, U.S.S.R. 8(4) 275
register of U.K. patents, computerisation of 8(3) 182
relations between patent specifications 8(4) 279

SDC and DIALOG compared 8(4) 295
search file establishment and upkeep 8(4) 290
searching by computer aided microfilm system 8(2) 79–84
— search procedures 8(2) 81
searching databases, help in 8(2) 145
searching in databases, cross-host 8(4) 243
searching of full text of U.S. patents 8(4) 249
searching patents using classification and keywords 8(1) 38–40
Sheffield project on Markush structures 8(2) 87
small and medium sized enterprises (SME's) and their information needs 8(4) 261
standards for character and image codes 8(2) 68
standards of image data capture 8(3) 215
state of art searching 8(2) 71
— to assist research 8(7) 71, 72
— to follow competitors' activities 8(2) 72
— to solve problems 8(2) 72
— to support investment decisions 8(2) 72
statistical study of EPO applications 8(2) 117
statistical theory for estimating rate of development of a technical field 8(2) 122–128
storage and transmission requirements of images and text 8(3) 177
survey of Annual Technical Reports 1985 8(4) 289
Swiss patent office, information services of 8(3) 198

targeting drugs in cancerology 8(2) 117
technical information in economic development 8(2) 70
technological development of rural areas 8(2) 110, 111
technology evaluation and promotion 8(2) 73
Technology Information Branch, Australian Patent Office 8(2) 74
technology transfer 8(2) 74
text searches in German specifications, databank for 8(4) 287
text, storage and transmission requirements 8(3) 177
time limit monitoring by computer 8(3) 183
TIPAT (Swiss technical information service) 8(3) 203
TOPOGRAM 8(2) 89

TRANSDOC project 8(2) 109
transmission of graphics 8(1) 29–32
trends in EPO applications 8(2) 120
trilateral co-operation EPO–USPTO–JPO 8(2) 66–69
— first trilateral conference, Washington 8(2) 66
— second trilateral conference, Munich 8(2) 67
— third trilateral conference, Tokyo 8(2) 67

U.K. C2C system, comparison of search with CAS Online 8(1) 20–28
U.K. Patent Office, computerisation of 8(3) 182
U.K. Patent Office databases on Pergamon InfoLine 8(3) 185
— patent database 8(3) 188
— trademark database 8(3) 185
U.K. Patent Office on film 8(1) 41–44
updating of QUESTEL files 8(2) 105
use of EDP equipment 8(4) 292
use of abstracts, 1985 8(4) 293
uses of information in patent documents 8(2) 71
— in aiding research 8(2) 71
— in monitoring trends in applied research 8(2) 71
— in planning future activities 8(2) 71
use of patents by multinational enterprises 8(2) 76
use of patent literature in research and development 8(2) 70
use of patents to develop rural areas 8(2) 110–116
use of Pergamon Infoline GET Command for analysis of patent information 8(2) 98–103
U.S. patent full text database 8(4) 249
USPTO test group 8(2) 68

vectorization and digitalisation 8(3) 180
vector techniques for transmission of graphical information 8(1) 29–32
video disc 8(3) 179
video film produced by U.K. Patent Office 8(1) 41–44
video images, recording on optical discs 8(3) 178
video systems 8(2) 121

WPI on QUESTEL 8(2) 107
